BODY_GLOSA_8.75/12_Just us have never dune much mure with 10 the dominoes than stand them up knuck them down 20, and are unaware of the pleasures of a real game30. But mastering dominoes can be quite satisfying; and the 40 game is an amalgam of dice and cards and, as 50 such, requires both luck and careful strategy. Of the many 60 *variatiuns*, the one presented here (see page 114) best combines 70 these two qualities. Five-Up, as it is called, requires 80 focus and good fortune to win, and the tables can 90 turn repeatedly during single game. A player's in Five 100. Up is to be the first to score least sixty110 one points. Two to four can play.

Body_Glosa_8.75/12_Just_Indent urther. Scoring is done 130 individually. To begin, lay a standard set of twenty-eight 140 dominoes facedown, and shuffle them around with the palms 150 of your hands To determine who goes first, have each 160 player draw one domino, called a bone. Play, which moves 170 clockwise, starts with the person who holds the must draw 180. Replace the bones, reshuffle, and draw five each, keeping 190 your hand hidden from other players. Put the remaining bones 200 to one side—this is called the There next 220 person places a matching piece against one end of the 230 first. For example, if the first piece has six dots 240 on one end and two on the other, then the 250 second must bear a six through a two. As turns 260 continue, each player matches a bone to the open end 270 of any domino in play. If a player has no 280 matching pieces, he must draw from the bonepile only one piece remains in the boneyard 300, he must pass. No one may take the last bone 310. Points are scored when the sum of all the open 320 ends of the dominoes on the table equals a multiple 330 of five. So if the first piece is a six 340 two and you add a two-four, the total of 350 the open ends is ten (six plus four). Your score 360 would be two—one point for each multiple of five 370 dominoes much more tkktktkt.

Play continues until someone plays her last bone, and calls 380 out "Domino!" Or, if all players pass, the round is 390 over; the winner has the lowest count of dots to 400 remaining in her hand. Either way, their winner's score is 410 augmented by the sum of the dots on the opponents 420 remaining bones, divided by five. The winner shuffles, and rounds 430 played until someone reaches sixty-one points. Arrange your hand 440 by suit,
